

The following are instructions for using the VM environment.

- 1) The CS provided VM is a Linux environment with QT and Open GL installed under Linux.
- 2) To get the VM to work you have to download and install the latest version of the VM player from the VMware company web site. <http://www.vmware.com/>
https://my.vmware.com/web/vmware/free#desktop_end_user_computing/vmware_player/7_0
- 3) To get the actual VM use the link: <http://downloads.cs.txstate.edu/VM>, download the latest VM (from February 26, 2014) and unzip it. Use only WinZip or 7-zip for unzipping.
- 4) Run with the VM. One way to run the VM is to double click the Ubuntu VMWare Virtual Machine configuration Icon in the Ubuntu 12.04 directory of the unzipped file.

Final note, the VM player for windows is free. If you work on a Mac you can: 1) Use the XCode environment/ Mac UNIX OS, 2) Buy Fusion from VMware,

Please start the process, as described, and let me know if you have issues.
